

iNeuron Internship Project

by- SHRUTI KHANDELWAL

Project Title: Financial Analytics

Technologies: Business Intelligence

Domain : Finance

Project Difficulties level: Intermediate

Problem Statement:

Without analyzing the competition, it is difficult for a business to survive.

You are tasked to analyzing the competition for the management to provide better results.

This data set has information on the market capitalization of the top 500 companies in India.

Serial Number, Name of Company, Market Capitalization in Crores ,Quarterly Sale in crores

Find key metrics and factors and show the meaningful relationships between attributes.

Do your own research and come up with your findings.

Importing Libraries

Importing the necessary libraries for data manipulation, analysis, and visualization.

```
In [1]: 1 import pandas as pd
        2 import numpy as np
        3 import matplotlib.pyplot as plt
        4 import seaborn as sns
        5
        6 import warnings
        7 warnings.filterwarnings('ignore')
```

Loading Dataset

Read the dataset file into a pandas DataFrame

```
In [2]: 1 df = pd.read_csv(r'C:\Users\USER\Downloads\Top 500 Companies - India.csv')
        2 df.head()
```

Out[2]:

	S.No.	Name	Mar Cap - Crore	Sales Qtr - Crore	Unnamed: 4
0	1	Reliance Inds.	583436.72	99810.00	NaN
1	2	TCS	563709.84	30904.00	NaN
2	3	HDFC Bank	482953.59	20581.27	NaN
3	4	ITC	320985.27	9772.02	NaN
4	5	H D F C	289497.37	16840.51	NaN

Defining columns:

Market Capitalization: Market capitalization is a measure of the total value of a publicly traded company. It is calculated by multiplying the current market price of a company's outstanding shares by the total number of those shares.

It is used as an indicator of a company's size and is one of the most commonly used metrics to evaluate and compare companies in the financial markets.

Companies with larger market capitalizations are generally considered to be more established and stable, while those with smaller market capitalizations are often seen as riskier or having greater growth potential.

Sales : Sales, in a business context, refers to the revenue generated from the selling of goods or services to customers. It represents the total value of products or services sold by a company during a specific period, typically measured in monetary terms.

Data Exploration and Preprocessing

Perform initial data exploration to understand the structure of the dataset and preprocess it as needed.

```
In [3]: 1 #Checking columns
        2 df.columns
```

Out[3]: Index(['S.No.', 'Name', 'Mar Cap - Crore', 'Sales Qtr - Crore', 'Unnamed: 4'], dtype='object')

```
In [4]: 1 #Total number of rows and columns
        2 df.shape
```

Out[4]: (488, 5)

In [5]:

```
1 #Complete information about the dataset
2 df.info()
```

```
<class 'pandas.core.frame.DataFrame'>
RangeIndex: 488 entries, 0 to 487
Data columns (total 5 columns):
 #   Column                Non-Null Count  Dtype
---  -
 0   S.No.                 488 non-null    int64
 1   Name                  488 non-null    object
 2   Mar Cap - Crore       479 non-null    float64
 3   Sales Qtr - Crore    365 non-null    float64
 4   Unnamed: 4            94 non-null     float64
dtypes: float64(3), int64(1), object(1)
memory usage: 19.2+ KB
```

In [6]:

```
1 #Checking duplicate values
2 df.duplicated().sum()
```

Out[6]: 0

In [7]:

```
1 #Checking null values
2 df.isnull().sum()
```

Out[7]:

```
S.No.          0

dtype: int64
```

In [8]:

```
1 #Removing unnecessary column
2 df = df.drop('Unnamed: 4', axis =1 )
```

In [9]:

```
1 #Handling missing values by dropping rows with missing values
2 df = df.dropna()
```

In [10]:

```
1 #Let's check our dataset now!
2 df.isnull().sum()
```

Out[10]:

```
S.No.          0
Name           0
Mar Cap - Crore    0
Sales Qtr - Crore    0
dtype: int64
```

```
In [11]: 1 #Statistical description
         2 df.describe()
```

Out[11]:

	S.No.	Mar Cap - Crore	Sales Qtr - Crore
count	365.000000	365.000000	365.000000
mean	250.435616	31300.970301	4395.976849
std	147.106354	67224.641338	11092.206185
min	1.000000	3017.070000	47.240000
25%	133.000000	5089.870000	593.740000
50%	264.000000	9097.330000	1278.300000
75%	363.000000	21372.180000	2840.750000
max	499.000000	583436.720000	110666.930000

Feature Engineering

Create additional meaningful features that can aid in the analysis. For example, calculate the profit margin using the existing columns.

Profit Margin: It represents the proportion of profit earned per unit of sales. A higher profit margin implies that the company is effectively generating profits from its operations.

```
In [12]: 1 # Calculate Profit Margin
         2 df['Profit Margin'] = df['Mar Cap - Crore'] / df['Sales Qtr - Crore']
         3
```

```
In [13]: 1 # Calculate Market Share
         2 total_market_sales = df['Sales Qtr - Crore'].sum()
         3 df['Market_Share'] = (df['Sales Qtr - Crore'] / total_market_sales) * 100
```

```
In [14]: 1 df.head()
```

Out[14]:

	S.No.	Name	Mar Cap - Crore	Sales Qtr - Crore	Profit Margin	Market_Share
0	1	Reliance Inds.	583436.72	99810.00	5.845474	6.220507
1	2	TCS	563709.84	30904.00	18.240676	1.926045
2	3	HDFC Bank	482953.59	20581.27	23.465685	1.282696
3	4	ITC	320985.27	9772.02	32.847382	0.609026
4	5	H D F C	289497.37	16840.51	17.190535	1.049559

Exploratory Data Analysis (EDA)

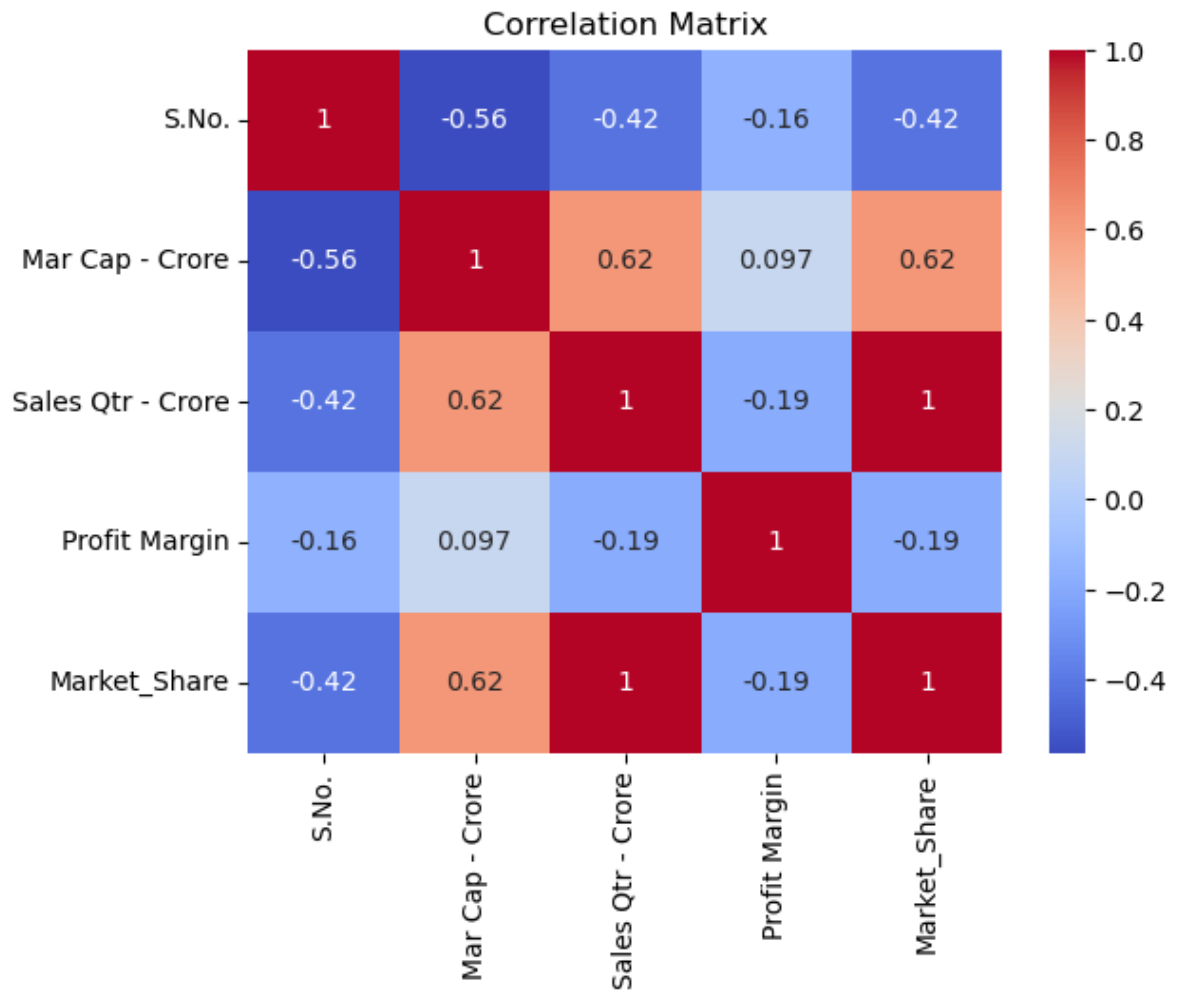

Perform exploratory analysis to gain insights into the dataset and identify relationships between

In [15]:

```

1 # Correlation matrix
2 correlation_matrix = df.corr()
3 sns.heatmap(correlation_matrix, annot=True, cmap='coolwarm')
4 plt.title('Correlation Matrix')
5 plt.show()

```

Insights:

1. Market Capitalization and Sales are moderately correlated.
2. There is negative and zero correlation between Profit Margin with respect to Sales and Market Cap.

Key Metrics and Factors:

Identify key metrics and factors for analysis. For example, you can focus on market capitalization and sales as key indicators of competition.

```
In [16]: 1 # Key Metrics
2 mean_market_cap = df['Mar Cap - Crore'].mean()
3 median_market_cap = df['Mar Cap - Crore'].median()
4 total_sales = df['Sales Qtr - Crore'].sum()
5
6 print(f"Mean Market Capitalization: {mean_market_cap}")
7 print(f"Median Market Capitalization: {median_market_cap}")
8 print(f"Total Sales: {total_sales}")
9
```

Mean Market Capitalization: 31300.970301369864
Median Market Capitalization: 9097.33
Total Sales: 1604531.55

Comparative Analysis and Data Visualization:

Conduct comparative analysis and visualize the data to understand competition and relationships between variables.

```
In [17]: 1 # Visualize Market Capitalization
2 sns.histplot(df['Mar Cap - Crore'], kde=True)
3 plt.title('Market Capitalization Distribution')
4 plt.xlabel('Market Capitalization (Crore)')
5 plt.ylabel('Frequency')
6 plt.show()
```

In [18]:

```
1 # Scatter plot of Market Cap vs. Sales
2 plt.scatter(df['Mar Cap - Crore'], df['Sales Qtr - Crore'])
3 plt.title('Market Capitalization vs. Sales')
4 plt.xlabel('Market Capitalization (Crore)')
5 plt.ylabel('Sales (Crore)')
6 plt.show()
7
```

TOP 5 COMPANIES WITH HIGH MARKET CAPITALIZATION:

```
In [19]: 1 # Sort the dataset by market capitalization in descending order
2 sorted_data = df.sort_values('Mar Cap - Crore', ascending=False)
3
4 # Select the top 5 companies with the highest market capitalization
5 top_5_companies = sorted_data.head(5)
6
7
8 print(top_5_companies.value_counts())
9 # Plot the market capitalization of the top 5 companies
10 plt.figure(figsize=(10, 6))
11 plt.bar(top_5_companies['Name'], top_5_companies['Mar Cap - Crore'])
12 plt.title('Top 5 Companies with Highest Market Capitalization')
13 plt.xlabel('Company')
14 plt.ylabel('Market Capitalization (Crore)')
15 plt.xticks(rotation=45)
16 plt.show()
```

CONCLUSION

The correlation coefficient of 0.62 suggests that there is a positive relationship between market capitalization and sales.

As sales increase, there is a tendency for market capitalization to increase as well. This indicates that sales performance has a significant impact on the market value of a company.

Therefore, companies should focus on strategies to drive sales growth. This can involve expanding market reach, introducing new products or services, improving marketing and sales efforts, and targeting customer needs effectively.

While sales have a positive correlation with market capitalization, it's important to note that market capitalization is influenced by various other factors as well. These factors can include industry trends, company profitability, competitive landscape, management quality, brand value, and investor sentiment. Therefore, market capitalization should not be solely relied upon as a measure of a company's performance or value.
